

POWER DOOR PRODUCTS

February 2015 Edition

Welcome to 2015 and thanks again for your support in 2014!

HIGHLIGHTS

- Training
- Product Spotlight
- Parking Equipment
- FAAC Fluid
- Safety
- Prices Changes
- Save the Date

While 2014 started slow the end of the year picked up quite nicely. Although it looks like mother nature may not cooperate again, but, it does feel as though there is more work out there this year than last. Let's keep our fingers crossed. If you would like to expand your product line to help bring in additional sales please let us know, we will be happy to train you on the variety of products we carry. Please see our general catalog for the various gate operators, door operators and access controls we carry. We can also assist in the field with system layout and programming.

TRAINING

Many of you have been asking about training sessions not only for the knowledge but to obtain hours for renewing your gate operator installer certification. Power Door will be holding several training sessions this winter and spring. The first session will be Friday March 6th. This first session will include a beginners electrical circuits class as well as reviews on Powermaster's new

"DC" operators, including the "DC" SG slide gate operator and SBG barrier gate, Viking's new V-FLEX controller and HySecurity's "DC" operators and the Slidedriver. We will also have a brief gate operator safety review.

To register or for more information, please contact Angel @914-698-5083 or email at angel@powerdoorproducts.com

Product Spotlight

Hysecurity HydraSwing Swing Gate Linear Actuator

HydraSwing is the perfect choice of linear actuator for large, heavy swing gates and swing gates subject to extreme wind load factors. Ideal for commercial, industrial or residential sites, HydraSwing gracefully moves a 16 ft./4,000lb leaf in 10-15 seconds and a 40 ft./15,000lb gate leaf in 20-30 seconds.

- Features symmetrical design for left or right hand mounting and industrial grade components for extremely low maintenance and exceptionally long life.

Proven reliable hydraulics contain only one gallon of high performance hydraulic fluid.

Configure gate operation to exact user needs with HySecurity's sophisticated and easy-to-use Smart Touch Controller and Smart Touch Analyze and Retrieve Tool (S.T.A.R.T.).

Seamless synchronization with all HySecurity operators for dual gate, sally port or sequenced gate applications.

Rosslare AC-825IP Advanced Scalable Networked Access Platform

Designed with you – the installer – in mind, the AC-825IP has everything you've been looking for in a scalable networked controller. The AC-825IP is a state-of-the-art 4-door- networked access controller and is the backbone of a medium-scale to high-scale security system. The controller comes with one onboard expansion slot and can be further expanded by connecting up to 16 expansion boards via OSDP. Using only D-805 door expansion boards, a single AC-825IP can handle up to 74 doors and 60,000 users.

PARKING EQUIPMENT

Power Door Products, Inc continues to expand it's product line to include parking equipment for smaller lots and municipal applications. Our equipment of choice, Hectronic, offers reliability, flexibility and simple installation. Patrons can pay by space or plate and pay either at the machine or by cell phone. Hectronic offers many applications including enforcement and ticketing. Hectronic offers Innovative parking and access control equipment at a reasonable price. And as always, PDP will help design the project and provide support in the field. For additional information, please give us a call.

FAAC FLUID

This is the time of year we see a lot of FAAC operators come in for service. Please remember Power Door is an authorized repair center and can service or repair your operators promptly. A basic service includes taking your operator apart and re-assemble with new fluid and a new seal kit. This often eliminates sluggish operation in the cold caused by water build up in the fluid. Power Door orders all its FAAC operators with Arctic fluid (except in ground operators) for enhanced performance in the cold. We also repair using arctic fluid. Remember that for the last 6 months or so the Arctic fluid in new FAAC operators is clear as opposed to the older red and the standard fluid is pink. The Arctic fluid Power Door uses is still red.

SAFETY

We have been discussing and promoting safety and the UL 325 and ASTM standards for door and gate operators for many years. When following UL325 and ASTM standards you are helping to prevent injuries and reduce your risk of financial exposure if an accident should occur. The recent edition of Door & Access System Magazine, Winter 2014-2015, discusses two multi million dollar judgments, we encourage you to read these articles. We also encourage you to have company policies regarding safety standards when installing and servicing equipment.

PRICE INCREASES

PowerMaster is increasing their prices between 2.5-3.5% effective March 2nd. If you have any current quotes you wish to protect please place your orders soon.

HySecurity is increasing their prices 2% effective May 1st. They are also discontinuing the \$100.00 installer rebate on the StrongArm Park barrier gate. All other rebates will remain.

We know the business climate is still very competitive and Power Door will do what it can to provide you with the best value for your dollar.

SAVE THE DATE!

October
22 & 23, 2015

Power Door Products, Inc. will present Its very popular and informative sales and tech convention. Please mark your calendars. We will present the most innovative access control technology and the many "DC" products along with lively discussions and an opportunity to meet with old and new friends and industry leaders.
